Editor with Abacus integration

Direct address search via entry field

Previously, the system showed just the message that no address was found in the ERP. There is now a selection field to search for alternative addresses in the document.

Rechnungssteller		Alt	ernativen
Q Adresse such	nen und übernehm	ien	
Name *			Winox SA
c / o			
Strasse und Nr	Chemin de Long-O	2	101
Postfach und Nr			
Ortschaft *	СН	2504	Bienne

To search for the address, you can select the filter "ERP" (= address from Abacus) or "Directory" (= address from the analysis DeepBox).

Process only invoice with unique document type

New support article: Documents that are only classified as document type "Invoice" may not be processed anymore. A unique type (received/sent) must be specified so that they can be correctly classified.

Explanation of what "passive mode" means

New support-article: We have better defined what passive mode consists of, i.e., when the per-sonal or business DeepBox is not yet verified. Under this mode, the DeepBox can only be used in a limited way.

With the release on the 30th of June 2022, extensions and improvements were implemented in the following areas.

Release Notes

Editor with Abacus integration

Bug fix for editing the VAT field

Before: Entering a new value in the "VAT" field, would round the last digit. New: The given value is displayed as entered.

Additional information for the Address field is displayed

DeepAdmin

Introduction of Simple Boxes

Before: Users could only buy boxes with full functionality (integration possibility with Abacus or Swiss21), which led to various problems:

- The boxes with integration and the simple storage boxes had the same price of CHF 9 until now.

New: Simple boxes and intelligent boxes (advanced boxes), which can be integrated with external ERP systems, are now distinguished. Simple boxes are free.
