# Functions in the Mobile View

The mobile view offers a variety of new functions that could previously only be performed on the desktop.

Various bug fixes and improvements, such as

- Optimised display of DeepSign status on documents
- Improved display after changing the language
- Improved error message when logging in with wrong account

Various bug fixes and improvements, such as

- Improved onboarding for DeepSign/DeepV in combination with verification of the organisation
- Fixed a bug where in rare cases organisations were no longer visible after adding a personal DeepBox

Adding and forwarding signatories

After starting a signature process, signers can newly forward signatures or add new signees. A prerequisite is that the initiator's organisation has at least a Small subscription.

Administrators (initiator and observer with administrator rights) can add signatories at any time regardless of the subscription.

deepcloud | **DeepSign**

Improvements to email notifications, such as

- Document name is now also visible in the subject
- Changed sender from user to organisation
- Optimised display for invitations from Personal Boxes
- General improvements

Various bug fixes and improvements, such as

- Bug fix when downloading documents as observer without admin rights
- Unification of the DeepSign dialogues
- Improved error message when signing password-protected documents

New DeepFlow "Post-It" / DeepFlow button in editor

There is a new button "Flows" in the editor, which enables a direct jump to the flow settings. The flow settings have also been extended by the new function "Post-It/Post-It Urgent".
